Michael Horvat

RF Engineering Leader | Electronic Warfare (EW) | Counter-UAS (C-UAS) | Spectrum Operations | DAS & Mission-Critical Communications

Miami-Fort Lauderdale Area

Summary

RF engineering professional with experience supporting mission-critical communications and operating in complex electromagnetic environments, with a dual focus on both technical execution and business leadership. My work centers on electronic warfare (EW), spectrum awareness, and low-observable RF systems—analyzing, designing, and optimizing communications in conditions where reliability, discretion, and performance are essential. This includes mitigating interference, improving signal resilience, and applying principles aligned with low probability of intercept/detection (LPI/LPD). In addition to my engineering involvement, I play an active role across the full project lifecycle—from system design and technical strategy to client engagement, sales, and program execution. This dual perspective allows me to translate complex RF challenges into practical, deployable solutions while aligning technical capabilities with mission requirements and business objectives. I also have experience supporting counter-UAS (C-UAS) efforts, including RF-based detection, analysis, and mitigation of unmanned systems operating within the spectrum. This includes understanding drone communication links, identifying vulnerabilities, and contributing to strategies that enhance situational awareness and airspace security. My background spans both commercial wireless infrastructure and defense-oriented RF applications, with hands-on experience in DAS, signal propagation, and operating in dense or contested RF environments. This enables me to bridge the gap between engineering teams, stakeholders, and decision-makers. Core areas of focus include: Electronic warfare (EW) and spectrum operations Counter-UAS (C-UAS) RF detection and mitigation RF system design, analysis, and propagation modeling Interference identification and mitigation Low-observable / LPI-LPD communications Technical sales, client engagement, and program leadership I approach every project with an emphasis on reliability, operational effectiveness, and disciplined execution—understanding

that in many environments, communications are not just important, but mission-essential.

Experience

Stealth RF
Chief Technology Officer
July 2019 - Present (7 years)
Coral Springs Florida

- Led design and deployment of RF systems across complex environments (commercial and mission-critical)
- Supported EW-aligned capabilities including spectrum analysis and interference mitigation
- Contributed to C-UAS efforts through RF-based detection and mitigation strategies
- Managed client relationships, technical sales, and project execution end-to-end
- Delivered solutions that improved coverage, reliability, and compliance with public safety requirements

CellAntenna Corp.
Systems Engineer
July 2015 - July 2019 (4 years 1 month)
Coral Springs Florida

My primary responsibility is to build & maintain influential relationships with customers by proactively offering engineering and supply chain solutions.

My duties include; providing product presentations, technical support, identifying sales opportunities, and providing technical design assistance within assigned accounts. I also provide consulting on the customer’s design/ product cycle from concept to production, with the goal of creating multiple designs for the customer's end product. I communicate with management on new opportunities, performance of territory, identification of potential performance risks of territory, and escalating customer issues/concerns as needed.

CellAntenna Corp.
R&D Intern
June 2013 - May 2015 (2 years)
Coral Springs Florida

During this internship I was a part of several projects that incorporated cutting edge technologies such as quad-copter drones and software defined radios. I also did spectral analysis and Direct Antenna System (DAS) designs. Please view my projects section if you would like to know more about my experience with these technologies.

Education

Florida Atlantic University

Master's degree, Electrical and Electronics Engineering · (2008 - 2015)
