Top Skills

Cross-functional Team Leadership
Dark Web Research
Artificial Intelligence (AI)

Certifications

Microsoft Professional Certificate: Foundations of AI and Machine Learning Engineering
Open Source Intelligence Gathering (OSINT) Certification
Combatting Terrorism Financing Certification

Honors-Awards

Human Rights Scholarship Award

Publications

AI in Military Defense: Risks and Rewards
Sky’s the Limit: The Future of Air Warfare
When AI Goes Rogue: The Security Risks of Agentic AI

Jordan Rosenquist

AI | Defense Tech | International Security
Washington, District of Columbia, United States

Summary

I develop and implement emerging Artificial Intelligence and Machine Learning technologies to enhance decision-making in military, defense, and national security contexts. My work focuses on AI-enabled systems as force multipliers, operational analysis in domestic and international conflict zones, risk assessment, open-source intelligence, and the intersection of technology and strategic policy.

I hold a B.A. in International Security and a B.S. in Criminology from San Diego State University, with academic research centered on the application of AI across defense, political, and military, systems. My academic experience spans high-level programs at the University of Oxford and SciencesPo, where I led teams in AI and Quantum Computing/Post-Quantum Cryptography, integrating defense policy with technological innovation.

Passionate about translating cutting-edge AI into operational and strategic advantage, I explore how AI reshapes decision-making, accelerates operational tempo, and informs governance in high-stakes environments.

Experience

Anduril Industries
Systems Security Engineer
May 2026 - Present (2 months)

Forward Global
Associate
April 2025 - March 2026 (1 year)
Washington, DC

I design and deploy AI and machine learning systems that act as force multipliers for intelligence collection, adversary behavior prediction, threat

monitoring, and risk analysis in national security and defense contexts. My work integrates deep learning, generative AI, LLMs, and RAG systems into operational intelligence workflows to develop new products and service offerings, accelerate research and decision-making, and uncover threats, including in deep and dark web environments.

A core strength is translating between business and technology: I identify operational challenges and craft technical solutions that deliver concrete, measurable value. As an AI subject matter expert, I am a key contributor to proprietary AI tool and strategy development, turning automation into high-impact intelligence investigations. I drive cross-departmental R&D initiatives to embed AI into geopolitical risk and threat monitoring frameworks, advising leadership on technology adoption and decisions that enhance operational and strategic advantage.

Education

UCLA

Master of Engineering, Data Science · (March 2026)

University of Oxford

Pro, International Relations and Affairs · (June 2023 - August 2023)

Sciences Po

International Relations and Affairs · (August 2023 - January 2024)

San Diego State University

Bachelor of Arts, International Relations and National Security Studies · (August 2021 - May 2024)

San Diego State University

Bachelor of Science, Criminology · (August 2021 - May 2024)
