Object Pipeline-Based Virtual Infrastructure Management

Method and system for automatic and remote server provisioning using virtual machine appliances

Evan Kotsovinos

VP at Google
New York, New York, United States

Summary

I am focused on privacy, safety, and security at Google. Previously, I served as Head of Global Infrastructure at American Express and Asia CIO at Morgan Stanley. I have worked in tech, financial services, R&D, academia, and startups. I hold a PhD in Computer Science from the University of Cambridge and a Masters in Finance from London Business School.

I lead by building world-class, effective, efficient, and engaged teams that love to solve challenging problems and make an impact. Key elements of my leadership approach are bringing together the best talent, instilling a sense of purpose and direction, empowering and supporting, being transparent and inclusive, and holding myself and others accountable.

I have learned how to flex, adapt, and lead teams of different shapes and sizes -- including large regional and global organizations of up to 15,000 people. I have also learned how to lead in a number of different cultural and business environments, having lived and worked in seven countries across three continents.

My background and expertise is primarily in technology, and secondarily in finance. While I run a large organization, I am highly technical. I built one of the first cloud computing prototypes, and I am the author of four patents and several peer-reviewed publications, which have been cited more than 1600 times.

Experience

Google

3 years 9 months

VP, Privacy, Safety & Security
September 2024 - Present (1 year 11 months)
New York

System and method for detecting a dishonest user in an online rating system

Method and system for the transparent migration of virtual machines storage

VP/GM, Governance & Protected Data
November 2022 - September 2024 (1 year 11 months)
New York

Led teams working on strategy, product, and engineering across the lifecycle of data at Google. Drove large-scale transformation across Google to deliver superior control, privacy, and security to our five billion users around the world; satisfy the requirements of our regulators; and establish Google as THE trusted global leader in managing and protecting data.

Focused on efforts to protect data in AI, including in data provenance, lineage, and safety; as well as the use of privacy-preserving technologies to help deliver exceptional model performance while keeping our users and their data safe.

Also responsible for horizontal Governance and Risk Management, including: the Data Protection Office coordinating cross-Google privacy efforts; engaging with the community on key standards; and more broadly leading technical planning and execution against several global regulatory and compliance objectives.

Eurobank
Board of Directors
July 2024 - Present (2 years 1 month)
Athens, Greece

Non Executive Director

American Express
SVP, Global Head of Infrastructure
February 2019 - November 2022 (3 years 10 months)
New York

Responsible for the company’s global technology infrastructure services and resources, including hybrid cloud engineering and operations, big data and databases, mainframes, data centers, Site Reliability Engineering, technology resiliency and disaster recovery, and production management for all lines of business.

Led the teams that built a very successful private cloud while advancing their public cloud strategy, rolled out a zero-downtime architecture that delivered exceptional availability, built an industry-leading SRE team, enabled the entire company to work remotely at the beginning of the pandemic and then come

back when it was safe to do so, and delivered over $150M of annual operating leverage to the bottom line.

Morgan Stanley

11 years 4 months
