Sam Zachary

Analytics Leader at Intel
Stamford, Connecticut, United States

Summary

Senior Data Engineer at Intel Foundry, currently building data infrastructure to track manufacturing operations and support financial reporting, with previous experince in process improvement and quality & reliability.

I am a big believer in exploring new technologies and love testing new platforms and tools. Currently testing and building with Cursor, Claude, Turso, and SQLMesh.

My go-to tools are:
Data Analysis (R, JMP, SQL)
Data Visualization & Reports (Tableau, PowerBI)
Workflow Automation & ETL (Python)
Basic ML (OpenCV, PyTorch, Tensorflow)
Modern cloud/data platforms (Databricks, Snowflake, AWS Redshift, Azure, Spark)

Outside of work, I enjoy hiking and trail-running with my dogs and spending time with family.

Experience

Intel Corporation
8 years 2 months

Senior Data Engineer - Business & Operations
May 2024 - Present (1 year 4 months)
New York City Metropolitan Area

Azure - AWS - Databricks - Python - AI - Leadership

Driving organization towards "Reflexive AI" - teaching peers across many job roles how to maximize utility of AI tools (LLMs, MCPs, GANs, Coding Assistants, etc) and identify gaps in current AI tools.

Own sustaining and development of group's entire analytics back-end, including Azure environment (blob storage, functions, auth) and data warehouse (Redshift).

Significant contributor to development of ETL stack (Python & SQL in Databricks) that handles 100GB+ of data per day, via APIs, webhooks, and pipelines.

Lead and mentor junior engineers & analysts across three countries (US, Malaysia, Thailand) on factory operations, business model, financial indicators, and data analysis.

Data Engineer - Quality Systems

April 2020 - May 2024 (4 years 2 months)

New Mexico, United States

Python - Snowflake - PowerBI - R - SQL Server

Executed a large-scale migration and onshoring of legacy data infrastructure (SQL Server, SSRS Reports) to Snowflake and PowerBI. Migration included 200+ tables, reports, and procedures/ETLs.

Automated several analyst and technician workflows with Python, OpenCV, and Snowpark, reducing labor costs and cutting time-to-data for critical R&D experiments from days to minutes.

Served as lead analyst for several major quality task forces. Used R, JMP, and many other tools to perform statistical analysis and basic ML techniques (CART Gradient boosting, MICE, etc). Biggest win was identifying root cause for a major excursion and de-risking $30M+ of product.

Process Analytics Engineer

July 2017 - April 2020 (2 years 10 months)

New Mexico, United States

JMP - R - SQL - DOE - Process Engineering - Training

Improved operations in a critical factory bottleneck by 20%, one of the factory's largest cost savings projects that year. Achieved by running a large DOE to collect data for a response-surface method algorithm that enabled major reduction in equipment calibration time.

After first year in role, developed a new data analysis cirriculum based in R, JMP, and PowerBI to meet demand for virtual courses. Taught courses to >60% of new process engineers and analysts in organization over four years, mainintaining an NPS above 80 over three years and 400 students.

IBM
Junior Business Intelligence Analyst
2016 - 2017 (1 year)
Philadelphia, Pennsylvania, United States

Set-up dashboards with Tableau/Cognos for internal project management and Lean/Six-Sigma efforts. Wrote and published documentation for APIs and other data systems.

Contractor at IBM via Aerotek while I was finishing my final classes at Drexel.

Bristol Myers Squibb
Computational Research Co-Op
2015 - 2015 (less than a year)
Princeton, New Jersey, United States

Built predictive models to decrease demand for expensive high-throughput screening programs and speed up drug discovery with Matlab and R. Finalist for "Top Co-Op Research Project" award.

Education

Drexel University
Master of Science - MS, Materials Engineering · (2017)

Drexel University
Bachelor of Science - BS, Materials Engineering · (2013 - 2016)
