Representation of User Transaction Processing Behavior with a State Transition Matrix

Andrew Fenic

Software Architect
Richmond, Virginia, United States

Summary

Experienced Senior Software Engineer skilled in Agile development, Java, Javascript, Angular, Elastic Search, C/C++, Databases. Strong engineering professional with a Bachelor of Science (B.S.) focused in Computer Science from Syracuse University.

Experience

V2X Inc

Principal Software Engineer, Software Architect
2013 - Present (13 years)
Richmond, Virginia

Senior Software Engineer and Solutions Architect. Spearheaded transition of Real Time Spectrum Operations software from a workstation to a web-based multi-user cloud architecture leveraging containerization, Angular, and .NET platform. Implemented faceted search UI and indexing engine using elastic search, Node.JS, Express, and Angular for AWS deployed Northstar product using agile (Scrum) development practices. Implemented charts, data mining, and device interface code for RDR Web product line. Used HTML 5, CSS, JavaScript, XSL, JQuery, and JQuery UI components. Implemented back-end RESTful HTTP web services using .NET technology stack (C#) and MySQL. Implemented multi-threaded sensor interface code using C++. Worked on effort to migrate core UI to Angular architecture. Worked on an autonomous rover (Autonomouse) leveraging Google Tango for point cloud collection and a single board computer for real time map stitching and Navigation. Implemented area search and navigation algorithms as well as map stitching and noise elimination leveraging Java and Python.

Intelligent Software Solutions

Senior Software Engineer
2005 - 2013 (8 years)

Senior Software Engineer, Team Lead for multiple large scale projects. Primary focus was Java Enterprise Application Development and Web Front End development in a dynamic high growth environment. Implemented globally

deployed intel database and analytics portal using Java, SQL Server, and Ajax UI. Implemented strategy to task management, targeting, and assessment system using Java Enterprise, Oracle, and Web-Enabled Temporal Analysis System.

Northrop Grumman
Senior Software Engineer
1994 - 2005 (11 years)

Lead C++, Java software engineer for Intelligent Transportation System, Discrete Event Simulation, and Document Management projects. Implemented Technologies Database and web portal using J2EE , JSP, Lucene. Implemented enterprise applications using J2EE, EJB, Oracle, SQL Server. Implemented firmware in C/C++, including automatic "in range" wireless data transmission, for onboard vehicle computers (for New York City, Washington Transit Automated Vehicle Monitoring). Implemented firmware (Motorola MBX860 platform) in C/C++, including integration of a third party TCP/IP stack, for bus AVL over cellular data networks.

Education

Syracuse University
Bachelor of Science (B.S.), Computer Science
