Publications

Dynamical emergence of complex structures in field theories.

Energy Landscape of d-Dimensional Q-balls

Thesis: "Emergent Coherent Structures in Non-Equilibrium Field Theory"

Bubbling the False Vacuum Away.

Relaxation effects in inner-shell photoionization of Mg, Ca, and Sr

Joel Thorarinson

Build Intentional Systems: Structures That Perceive, Decide, Endure
London, England, United Kingdom

Summary

With nearly a decade of experience in portfolio management and expertise in physics, machine learning, and statistics, they currently serve as Friend of Theo at Global Science League, contributing to innovative scientific exploration. They previously held impactful roles at Eisler Capital and Stoneview Technologies, applying data-driven strategies to complex problem-solving. Their mission involves leveraging interdisciplinary knowledge to drive advancements in scientific discovery and organizational objectives. Known for their analytical rigor and collaborative approach, they aim to align with the organization's values while pushing the boundaries of research and technology.

Experience

Eisler Capital
Architect, Signal Intelligence & Execution
June 2024 - Present (1 year 2 months)
London, United Kingdom

Stoneview Technologies
Portfolio Manager
December 2016 - May 2023 (6 years 6 months)
Greenwich CT

Walleye Capital
Portfolio Manager
September 2021 - April 2023 (1 year 8 months)
Greenwich, Connecticut, United States

Teza Technologies
Strategist / Portfolio Manager / Team Lead
May 2011 - July 2016 (5 years 3 months)
Chicago

RGM Advisors, LLC

Quantitative Researcher / Portfolio Manager

March 2009 - May 2010 (1 year 3 months)

Austin, Texas

Brockardt Consulting Group LLC

Valuation Analyst

October 2008 - March 2009 (6 months)

Developed fair market value narrative reports of closely held private interests for estate tax planning and mergers. Researched public company balance sheets and implemented Monte-Carlo analysis for DCF's. Developed C# and Python codes to automate a majority of tasks in Excel.

Dartmouth College

5 years 1 month

Research

August 2003 - August 2008 (5 years 1 month)

Developed and optimized algorithms and fast parallel C ++ codes to solve constrained stochastic non-linear partial differential lattice equations on portable architectures and supercomputers. Studied the path to equilibrium using constrained Langevin techniques instead of Monte-Carlo to create distributions on non-linear field theories with various collaborators. Published 9 peer-reviewed technical documents on work which used both analytic and numerical calculations. Calibrated lattice parameters to match stochastic simulations to continuum equations.

Lecturer

August 2003 - August 2008 (5 years 1 month)

Prepared and gave a series of lectures and problem sets for a satellite course on Non-Perturbative Lattice QCD alongside the mixed undergrad/grad version of particle physics. Taught discussion and laboratory sections for various general physics courses (Light, Electricity, Magnetism, Modern Physics and "Physics for Poets").

ADRA

Development Logistician

January 2003 - May 2003 (5 months)

Aids education and Women's Empowerment Projects.

Andrews University

2 years 1 month

Research
August 2001 - August 2002 (1 year 1 month)

Studied relativistic photo-ionization cross-sections using Fortran and C codes. Published 2 peer-reviewed technical documents on work which used mainly numerical calculations.

TA
August 2000 - April 2002 (1 year 9 months)

Education

Dartmouth College
Ph.D, Physics & Astronomy · (2003 - 2008)

Andrews University
B.Sc, Physics · (2000 - 2002)
