Laura Crabtree

CEO & Co-Founder @ Epsilon3 (YC S21) | Optimizing processes for aerospace and beyond!
Redondo Beach, California, United States

Summary

Are you and your teammates running complex procedures on documents, spreadsheets, and wikis? It's time to digitize and level up with Epsilon3.

We help teams with their most critical and high-stakes operations, testing, and manufacturing by streamlining their procedures and running their missions smoothly and without error.

Our average customer saves over $400,000 per year with Epsilon3. Mission failures have cost $31.1 billion; Epsilon3 significantly reduces the chances of failures by ensuring adherence to safety and operational procedures.

Companies like NASA, Axiom Space, Blue Origin, Redwire, AeroVironment, and Commonwealth Fusion Systems are using Epsilon3 to improve efficiency and reduce errors.

WE HELP TEAMS THAT....

✓ Want real-time and collaborative procedure software
✓ Need tools to automate their procedures
✓ Want to prevent costly errors and provide mission assurance
✓ Want to get rid of outdated, error-prone, and inefficient solutions like Excel, Word, Confluence, and Jira
✓ Need to optimize and successfully scale their manufacturing, test, and ops efforts

If you’re running complex, high-stakes operations and you view technology as an investment that is critical to your success, Epsilon3 is your premier software partner for operations, testing, and manufacturing. If you're interested in learning more, email me at laura@epsilon3.io or find a time here: https://calendly.com/llcrabtree/15min

Personal Background:
Laura was one of the Crew Operations & Resource Engineers (CORE) who helped put the United States back in the human Space Flight business. Among the initial members of the operations team for SpaceX's Dragon spacecraft, she was also on console for the first Dragon mission in 2010, the first mission to the International Space Station (ISS) in 2012, and part of the commercial crew contract over the next decade—including the mission that delivered astronauts to the ISS in 2020. During that mission, Laura was the lead trainer for the crew and one of the CORE operators who communicated to and advocated for the crew during free flight.
Laura began her career at Northrop Grumman working various programs for DARPA and other DoD customers. She has a Bachelor's in Astronautical Engineering and a Master's in Systems Architecture, both from the University of Southern California.

Experience

Epsilon3
Co-Founder & CEO
October 2020 - Present (5 years 4 months)

SpaceX
10 years 11 months

Senior Mission Operations Engineer
September 2016 - August 2020 (4 years)
Hawthorne, California, United States

• Successfully trained and flew very first commercial crew astronauts
• Developed first commercial crew training plan and all documentation associated with crew training & tracking
• One of four CORE (Crew Operations Responsible Engineer) (NASA CAPCOM) operators to communicate with crew in-flight through successful Demo-2 Mission

Lead Mission Operations Engineer
March 2013 - September 2016 (3 years 7 months)
Hawthorne, California

Mission Operations Engineer

October 2009 - March 2013 (3 years 6 months)
Hawthorne, CA

Northrop Grumman

5 years 5 months

Systems Engineer / Deputy System Controller

April 2008 - October 2009 (1 year 7 months)
United Kingdom

Systems Engineer / System Operator

October 2005 - October 2008 (3 years 1 month)
United Kingdom

Systems Engineer

June 2004 - March 2006 (1 year 10 months)
Redondo Beach, California, United States

Education

University of Southern California

Bachelor of Science (B.S.), Aerospace / Astronautical Engineering · (2000 - 2004)

University of Southern California

Master of Science - MS, Systems Architecture in Engineering · (May 2012)
