Nishanth Mudkey

Solutions Architecture @ AWS | AI, Big Data, ML | AGI
United States

Summary

As a Specialist Solutions Architect at AWS, I leverage my expertise in Data, AI/ML, and Generative AI to enable innovative cloud solutions. With a robust background at AWS, having progressed through roles that harness the transformative power of AI and machine learning, I bring a deep understanding of these domains to my current position. Our team's mission aligns with AWS's commitment to providing cutting-edge cloud services, where I contribute to projects that underscore the importance of scalable and efficient architectures. My proficiency with the AWS cloud combined with data science skills, empowers me to deliver on complex initiatives.

Experience

Amazon Web Services (AWS)
2 years 11 months

Specialist Solutions Architect II (Data, AI & ML)
September 2024 - Present (1 year)

Cloud Engineer II (Big Data, AI & ML)
June 2024 - August 2024 (3 months)

Cloud Engineer (Big Data, AI & ML)
October 2022 - May 2024 (1 year 8 months)

IEEE Signal Processing Society
Researcher | IEEE SPS ME-UYR Programme
February 2022 - June 2023 (1 year 5 months)

Stevens Institute of Technology
1 year 1 month

Grader - CPE695WS Applied Machine Learning
February 2022 - May 2022 (4 months)
Hoboken, New Jersey, United States

Researcher | Industrial Alliance Program | Eastech, Inc.
January 2022 - May 2022 (5 months)
Hoboken, New Jersey, United States

In this project, an open-ended problem in the domain of wastewater management was undertaken for research and analysis. In the first phase of the project, wastewater network maps and data acquired from Eastech, Inc. were studied to develop a potential mathematical model that could be used to generalize networks of wastewater sites. In the second phase following the company's cloud update, new analysis was conducted using renewed data. Weather data was added to iTracker data (sensor data that collects flow information within wastewater pipes) to create a new data frame for analysis. In the final analysis, an attempt was made to forecast flow variables to test against real data.

Graduate Student Researcher (Advanced Robot Manipulators Lab)
May 2021 - January 2022 (9 months)
Hoboken, New Jersey, United States

I worked in the Advanced Robot Manipulators Lab at Stevens Institute of Technology. This project undertaking was a tiny attempt at understanding the plethora of technologies used in haptic teleoperation and simulated robot control. Three different problems were studied throughout the course of this project — installation and integration of a haptic device as an input interface device (IID) to a computer and its relevant applications, control of the haptic device and its force-feedback impulses, control of robotic manipulators in the AMBF (Asynchronous Multibody Framework) simulation environment using control algorithms and the IID.

Graduate Student Course Assistant - CS485 Societal Impact of Information Technologies
October 2021 - December 2021 (3 months)
Hoboken, New Jersey, United States

Summer Research Student (Digital Signal Processing)
June 2021 - August 2021 (3 months)
Hoboken, New Jersey, United States

Researched three different problems related to the ADMM (Alternating Direction Method of Multipliers) algorithm. In the first phase of the project, the popular LASSO (Least Absolute Shrinkage and Selection Operator) problem and its established results were studied under different iterative modifications in the implementation. In the second part, the compressed sensing problem and its solution convergence using the ADMM algorithm was implemented with satisfactory success. In the third case, the consensus-sharing problem was

studied thoroughly and attempts were made at solving the problem using the ADMM algorithm unsuccessfully.

Space Environment Research Centre (SERC)

AITC Summer Student Program / Northrop Grumman Global Externship Program

November 2016 - January 2017 (3 months)

Canberra, Australia

Northrop Grumman Global Externship Program:

R&D in space object position uncertainty estimation, prediction, and collision probability calculation.

Education

Stevens Institute of Technology

Master of Science (M.S), Applied Artificial Intelligence (Concentration: Mechanical Engineering) · (2020 - 2022)

UNSW | School of Mechanical & Manufacturing Engineering

Bachelor of Engineering (B.E.), Mechanical Engineering · (2014 - 2018)

FIITJEE

· (2009 - 2011)
