Asheswari Swain

A First Gen Graduate || Building Order Pulse || Data Engineer || Python || GenAI || Spark || AI || Valid EAD till 2027 || SQL || Azure || AWS || Databricks || Immediately Available || Freelancing
San Jose, California, United States

Summary

I'm a first-generation graduate and experienced Data Engineer with 9 years of expertise building robust data pipelines, scalable architectures, and insights that drive action.

Skilled in Python, Spark, SQL, Databricks, and cloud platforms (AWS, Azure), I've led projects across healthcare, retail, and manufacturing domains. I specialize in ETL optimization, real-time processing, and mentoring early-career professionals.

Currently based in the U.S. on a valid EAD (2027), I'm open to data roles that value empathy, ethics, and impactful work. Let's connect.

Experience

RecordBook (YC W22)
Freelance Software Engineer
September 2024 - Present (10 months)
San Francisco, California, United States

Celebal Technologies
Principal Consultant - Lead Data Engineer
June 2024 - August 2024 (3 months)
Bengaluru, Karnataka, India

Clarivate
Lead Data Engineer
July 2023 - November 2023 (5 months)

• Designed & developed a scalable automated ETL workflow using AWS services (EC2, Glue, Lambda, IAM, RDS) to
process clinical trial data.

• Designed a cloud-based data platform using AWS and Snowflake to process 500TB of clinical trial data, reducing the

analysis turnaround time by 45% and supporting 20+ drug development programs.
• Led a team of 10 engineers to design HIPAA- and GDPR-compliant data pipelines, integrating genomic, patient, and manufacturing data for real-time regulatory reporting in Power BI .
• Developed a scalable ETL framework with Apache Kafka and Spark, enabling real-time ingestion of 1B+ patient records annually, improving pharmacological monitoring by 30%.
• Spearheaded a migration of the $2 M data warehouse to AWS Redshift, improving query performance by 60% and ensuring compliance with global regulatory standards.
• Partnered with data scientists to deploy machine learning models for predictive drug safety analytics, reducing adverse event detection time by 25%.

Unilever
Assistant Manager - Data Engineering
September 2022 - June 2023 (10 months)

• Streamlined large-scale data processing (~350TB) by optimizing Spark code and reconfiguring Databricks clusters and jobs, achieving 30% faster processing and 20% cloud cost savings.
• Engineered a schema-driven architecture and optimized pipelines by consolidating 300 into 5 in ADF, reducing operational effort by 80%.
• Applied Predictive Recurrent Neural Network using TensorFlow to identify and eliminate underperforming products, improving market efficiency.
• Implemented Unity Catalog in Databricks for supply chain data, enabling data lineage, centralized governance, and improved quality. Achieved 30% reduction in data read costs.
• Designed the data model for HR data(~ 350GB) in Erwin to integrate data from sources such as Workday, internal systems and Teradata. Used SCD2 and 3NF architectural rules of Data Modeling.
• Oversaw and streamlined annual Azure and tooling expenditures surpassing $1.5M. Secured a $20K monthly decrease in Azure expenses while improving visibility in Azure and Databricks through strategic tagging, facilitating a show-back model that broke down costs by product and development spending by verticals.

• Led & mentored team, managed vendor teams, boosting productivity by 25% and speeding up on boarding.

Wipro Limited
Data Engineer
September 2015 - September 2022 (7 years 1 month)

• Developed a robust scalable data warehouse solution on Azure cloud services (used - ADF, DevOps, Azure synapse, SQL
DW) by consolidating multiple data sources that reduced data retrieval time by 60%.
• Designed and analyzed MDM architecture for Ferguson product and retail data in Salesforce using Reltio.
• Trained and managed vendors and junior resources to implement pipelines in ADF based on my architectural design.
• Databricks, PySpark and Spark SQL were used to identify key plumbing products, leading to a 10% increase in production
13% boost in sales.
• Developed Azure Data Factory pipelines to automate the Google Analytics Data loading process for Ferguson Enterprise
saving 3 hours/day human effort.
• Designed and deployed data models using Azure Stream Analytics to live stream 26 Countries' Fuel Price data in Shell
improving the data loading performance by 40%.
• Engineered Power BI dashboards with advanced features like RLS, subscriptions, alerts, triggers, incremental loads, Power
Apps, and Q&A, increasing performance and readability by 39%.
• Created interactive Power BI dashboards for Shell Petroleum, providing insights into fuel card usage, customer reviews, and
financial transactions with YTD, MTD, weekly, and daily metrics.
• Developed a live Power BI and SAP BO dashboard for BP's global drilling data project, aiding engineers during Hurricane
Harvey 2017 with real-time alerts, saving approx 3M USD.

Education

Birla Institute of Technology and Science, Pilani
Master of Technology - MTech, Computer Software Engineering · (September 2015 - November 2019)

Ravenshaw University

Bachelor of Science - BS, Information Technology · (June 2012 - June 2015)
