Power Electronics Specialization

Jason Bentley

Circuit Design Engineer | Circuit Design for High Speed Digital Electronics
Littleton, Colorado, United States

Experience

Lockheed Martin
2 years 5 months

Circuit Design Engineer
October 2024 - Present (1 year 4 months)
Littleton, Colorado, United States

Circuit Design Engineer Associate
September 2023 - October 2024 (1 year 2 months)
Littleton, Colorado, United States

OneCourt
Electrical Design Engineer
November 2022 - August 2023 (10 months)
Seattle, Washington, United States

• Designed the Battery Management System (2p2s) and 30W Power Supply circuits for a wireless haptic accessibility display aimed at enhancing the experience for blind and low-vision sports fans.
• Contributed to the development of the display's system design and architecture.
• Successfully designed and tested an experimental embedded inductor-coil PCB with the goal of reducing material costs by integrating Linear Resonant Actuators (LRA) directly into the PCB.

Wyze
Embedded Systems Engineer Intern
June 2022 - December 2022 (7 months)
Kirkland, Washington, United States

• Designed a goniophotometer for measuring 3D radiometric profiles of WYZE lighting prototypes and EDUs.
• Conducted research on UX requirements, engineering principles, and relevant scientific theories.
• Procured components such as spectrometers, development boards, and mechanical and optical parts.

• Programmed (C++ and Python), built, calibrated, and operated the goniophotometer.
• Developed Python-based software for data processing and generation of interactive 3D radiation profiles.

Education

University of Washington

Bachelor of Science - BS, Electrical Engineering · (September 2021 - August 2023)
