Introduction to Data Science

Seth Price

Symbolic Risk Analyst | AI | Philosophy | Anti-Ethics | Game Design | Reverse Psychology
United States

Summary

My work exists where:

AI grinds meaning into training data,
Gaming mechanics infect corporate strategy,
Identity becomes a deployable asset.

Core Functions
Dead Brand Revival → Resuscitate flatlined narratives with LLM-driven semiotic grafts.
Adaptive System Warfare → Build AI-native engagement traps that out-evolve competitors.
First-Principles Sabotage → Tear down legacy assumptions. Rebuild for high-stakes environments.
Clients: Fortune 500 vampires, startup mercenaries, and anyone who understands that "disruption" is now a defensive tactic.
If your playbook is obsolete before the ink dries, I’m the exploit.

Remember, if you're not paying me.
Someone else is.

[Let’s accelerate the inevitable.]

Experience

DharmaFactory
Education Evangelist
February 2025 - Present (5 months)

Bridging the gap between generative AI, branding, and narrative to redefine corporate engagement and identity

Developing intelligent storytelling ecosystems powered by AI-driven systems architecture

Thought leadership in future media, AI disruption, and next-gen UX design

Smugglers Union

Musician

August 2014 - Present (10 years 11 months)

If you wanted to know, you'd ask.

Self Employed

Systems Architect & Disruptor | Freelance / Independent

December 2015 - Present (9 years 7 months)

Okinawa, Japan

Functional programming, x86 assembly, and deep AI engineering to push the boundaries of software architecture

Led game development innovations, integrating social, interactive, and AI-enhanced storytelling

Consulted on Web3 ecosystems, designing blockchain-driven engagement mechanics

Storyverse

Defacto CTO

June 2023 - June 2024 (1 year 1 month)

Orchestrated a strategic migration of technical assets and resources, ensured uninterrupted services, and promptly resumed the development cycle, while establishing the new organization

Playco

2 years 8 months

Staff Software Engineer

November 2020 - June 2023 (2 years 8 months)

Used generative ai, and fine tuning models to produce output for story driven game experience.

Designed / architected / refined system which used nft asset metadata to generate full 2d characters for use in games

Software Engineer

November 2020 - May 2022 (1 year 7 months)

Spearheaded the development of the first-ever social games for Zoom’s in-meeting apps—working directly with Zoom’s internal team in a pre-release environment before public launch.

Built Tell Secrets and Ask Away, interactive hot-seat games designed to spark connection and conversation, setting the tone for social engagement within video calls.

Partnered with Ellen Digital Ventures to bring the hit party game Heads Up! to Zoom, reimagined for real-time video play—broadening both audience reach and gameplay formats.

Independently architected the full tech stack and early-stage infrastructure enabling Zoom-native game functionality, laying groundwork for future developers on the platform.

Developed a resilient, peer-hosted game orchestration system using a client-side state machine—allowing sessions to scale to Zoom's meeting limit, with automatic failover to the next-longest attendee if the host disconnects.

Department of Defense Education Activity (DoDEA) or (DoDDS)
Educational Aide

October 2018 - October 2019 (1 year 1 month)

Okinawa, Japan

Volunteered coaching two robotics teams. Taught photography to the yearbook club. Made educational games for the SMART 442i collaborative table learning center. Bechtel!

HotelQuickly Ltd
1 year

Head of Node.js Development
July 2015 - December 2015 (6 months)

Bangkok Metropolitan Area, Thailand

Promoted to Head of Node.js, leading a growing team of developers through system redesigns, team scaling, and technical mentorship across a multi-stakeholder platform.

Re-architected a mission-critical data ingestion pipeline, consolidating five fragmented systems (scrapers, direct APIs, partner portals, and over 150K lines of SQL logic) into a streamlined, RabbitMQ-powered flow.

Designed a modular parser that transformed a 9-hour ingestion process into a near real-time operation, dramatically improving data freshness and operational responsiveness across hotel availability feeds.

Reduced system complexity by replacing legacy cronjobs and ad hoc scripts with a pair of well-coordinated workers — cutting operational surface area and boosting maintainability.

Led and mentored a team of four, fostering a culture of ownership, pragmatism, and collaborative architectural decision-making.

System Architect
January 2015 - July 2015 (7 months)
Bangkok Metropolitan Area, Thailand

Led modernization efforts across legacy Node.js applications, transforming codebases in line with 12-Factor App principles to improve scalability and maintainability.

Mentored and onboarded engineering teams in “The Node Way,” promoting lean methodologies and programmer anarchy to foster autonomy and reduce process friction.

Architected next-generation APIs with a focus on speed, clarity, and concurrency—designed for fluid developer experience and long-term maintainability.

Evangelized best practices through workshops, internal coaching, and community talks, contributing to a vibrant, self-improving dev culture.

Led platform migration to containerized internal infrastructure using Deis.io, improving team deployment workflows and infrastructure resilience.

Presented at developer meetups, speaking on topics such as Node.js architecture, lean team dynamics, and performance tuning in modern JavaScript systems.

Lucky Puppy Games
Senior Software Engineer
August 2012 - July 2015 (3 years)

Refactored and extended a legacy PHP ad server (mAdserve) for seamless integration into Kik Messenger, supporting high-volume delivery of in-app ads at scale.

Contributed to the development of 12+ HTML5 games, including an exclusive title built for the launch of The Giver movie, collaborating across product, art, and engineering teams.

Engineered and maintained a custom ad monetization API, integrating Fortumo, Trialpay, YuMe, and Stripe to support diverse revenue streams across mobile platforms.

Oversaw multiple production release cycles, managing version control, QA, and deployment flows through GitHub and Heroku across a fast-moving dev pipeline.

Led the migration from Django-based backends to a lightweight, custom Node.js/CoffeeScript CMS stack with MongoDB — improving maintainability and adapting architecture to evolving product needs.

Coordinated cross-functional delivery, balancing game development timelines with infrastructure refactoring and third-party integrations.

Self Employed
Independent App Developer
December 2007 - August 2012 (4 years 9 months)

Independent contracting, learning everything from a bit of lisp to a bit of erlang, music production for games. Skills and technologies worked with include pear (php), padrino (ruby), node.js, vagrant and websockets. Consultant work, team leading...you name it, I probably did it.

D. Lux Productions
Full time hacker
September 2006 - December 2007 (1 year 4 months)

Full time code jockey/hacker Updating old AS2 widgets and apps to AS3 Writing PHP backends to support said widgets games and apps. Experimenting with 3d engines and other generally fun stuff
