Cooperative systems roll-out in Austria and Middle-Germany: resulting impacts on environment - first calculations

Walter Sepp Aigner .

uninterrupted innovation is key - even if too many hope to ignore innovation - I facilitate hands-on innovativeness with leading-edge champions in Europe as innovation facilitator and curator of (non-)knowledge inflows

Austria

Summary

Walter creates value for European Innovation Champions by leveraging 7 functions for them:

* R & D Portfolio Management (Connecting the dots)
* R & D Project design and Project Development (including proposal stages for public co-financing)
* Early User-Involvement and studies in Stage-Gates minus 1 and minus 2
* Concurrent Exploitation and Business Development
* Innovation Process Design for today's Creative Class
* Subtle + informal Project Management in large collaborative R & D consortia
* Coaching High-Potentials in emerging-technologies

For more than 7 years Walter led a private Think Tank serving leading-edge European High-Technology industries. Walter feels he has no reason to appeal to orthodox viewpoints of mainstream Marketing and Consulting. Last century he heavily taught and designed brand new Courses on Innovation Marketing and Marketing Engineering.

Today he fully focuses upon bottom-line results from strategic corporate R&D collaborations (involving location-based services, emergency operations, nano-technology, embedded-systems).

For the near future he ponders the idea of a community where his customer's high potentials co-create leading-edge knowledge on our future in dynamically evolving public narratives. This includes coping with non-knowledge, pioneering in resilience and a smart combination life styles.

His core method is best described as an extension of the SPIN-Selling approach (+ Jolles) to overcome Moore's Chasm by using Tuomi's Networks of Innovation. This involves appreciative inquiry, participating observation, Open-Space-Technology, qualitative research into management narratives and Expertise Sharing in Post Mortem Meetings.

His most severe weakness is his direct upfront approach - being an amateur sabre fencer. Also one of Walter's customers claims that only the smarter half of a team can follow his wording, speed and conception of how to get things done.

Walter works best when he cooperates with people who show a similar strong boundary role spanning behaviour and who are willing to fully share the agenda.

Specialties: 1. Hands-on jump-start collaborative industrial R&D projects in European High-Tech Industries.
2. Connecting-the-dots (Roadmapping concurrent to emerging projects and ideas) in order to retrieve strategically relevant returns and a nice Management Narrative;-)
3. Fastest possible concurrent Business Development due to a proven benchmarked approach.
4. Real build-up of the single most valuable competitive resource in innovation = focus on transfer of tacit user knowledge and use case context.

Experience

HiTec Marketing, Vienna, Austria
innovation facilitator, curator of (non-)knowledge and opportunities (Καιρός Kairós, serendipity)
May 2000 - Present (25 years 4 months)
Vienna, Austria

Walter's preferred functional description is 'curator of (non-)knowledge and opportunities (Καιρός Kairós, serendipity)'; our knowledge (and what we believe to be true) depends crucially on the cultural techniques we use. so preventing 'quick fixes' and wrong shortcuts in strategic innovation projects

is one way of adding value. Walter mentors a dozen high-potentials with corporate clients and on a pro-bono basis several key individuals.
At HiTec he can get excited about how others show off their special talents and genius ability. Many of these people are actually catalysts for his and HiTec Marketing's accelerated development.
In December 1997 he helped establish HiTec, a private non-for-profit research association dedicated to foster leading-edge technology-based innovation champions in Europe.

βῆτα otium - how cultural orders protect forms of serious leisure against criticism

ἐδιζησάμην ἐμεωυτόν - I've been exploring myself - c'est toujours la vie qui me regarde

September 1991 - Present (34 years)

our cosmos

almost anyone who talks or writes about serious leisure is on the defensive from the outset. What is it about a time beyond inertia that is not directed towards a defined goal but has its purpose in itself? βῆτα otium blends several approaches on how cultural orders stage free spaces of transgression in leisure and how they simultaneously protect life forms of leisure against criticism by upholding the concept of unproductive productivity by means of ἐδιζησάμην ἐμεωυτόν - I've been exploring myself

5G CARMEN

Consortium Partner

November 2018 - March 2023 (4 years 5 months)

EC H2020 Co-funded large-scale innovation flagship on challenging use cases

CCAV

Connecting Austria

Evaluator / Lead of Evaluation Team for Cooperative Connected L1 Truck Platooning Flagship

January 2018 - December 2022 (5 years)

Vienna / Austria

We have set up an evaluation design for the cooperative connected SEA Level 1 Truck Platooning Flagship Connecting Austria. Approach was presented and discussed at European Transport Research Conference 2018 in Dublin as well as at a couple of bilateral workshops. We received rather nice feedback on our approach of "digging for more" and are willing to share with other truck platooning teams globally.

Dep. of Marketing / WU-Vienna / Wirtschaftsuniversität Wien
Associate Professor
May 1986 - April 2000 (14 years)

Walter began his career on the faculty of the Department of Marketing at University of Economics and Business Administration in Vienna, one of the leading and by far the largest Marketing departments at European Universities. In his 14 years he designed 9 innovative second level (MBA) Marketing / Innovation Management courses from scratch and significantly redesigned 3. Real-life case-studies were always instrumental at the core of his teaching. He was a jury member of the European Foundation of Management Development (EFMD, Brussels) on Business-to-Business cases and Innovation cases for 5 consecutive years. He is editor of a book with a compilation of indigenous marketing cases
