Mark Jennings-Bates

Pioneering AI Leader | Champion of Data Valuations & Reliable Outputs | Search & Rescue Manager | Champion Rally Driver & World Record Holder

Kaslo, British Columbia, Canada

Summary

At MosaicDM, we are leading the way in pioneering frameworks for AI that are grounded in rigour, honesty, and trust. Our mission is to harness the power of AI to enhance the world, focusing on addressing global challenges in ESG, climate change, and poverty. Unlike traditional AI systems that rely on probabilistic outputs, we focus on developing AI solutions that provide reliable, intelligent, and deterministic results. Our technology is designed to deliver dependable outputs that can be trusted to shape a sustainable future.

With expertise in data asset management, we specialize in conducting data valuations to create balance sheet entries for what, to many, is hidden value. This capability enables us to help organizations unlock previously unrecognized assets and provide a clearer financial picture that drives informed decision-making.

In addition to my role at MosaicDM, I serve as a Search and Rescue Manager with Kaslo Search and Rescue and in Emergency Management and Climate Resilience in British Columbia. My dedication to service extends into my personal life, where I am a devoted husband and father.

I am also a co-founder of the Strand Group Impact Fund, a US-based 501(c)(3) charity. Through the Strand Group, we focus on leveraging regenerative finance structures to fund projects that not only create meaningful impact but also act as catalysts for regional development. The Strand Group is one of the 21 founding partners of the LG Nova Fund, which underscores our commitment to driving innovation and sustainable progress.

Outside of my professional life, I am a championship-winning rally driver and a world record holder, experiences that have instilled

discipline, resilience, and a strong sense of adventure. These qualities carry over into my work, where I am privileged to help shape a future where AI is not just a tool, but a cornerstone for sustainable development—reflecting our collective responsibility toward the planet and its people.
