Scott Rausch, PMP, MSBA

Senior Solution Architect | Business & Data Analysis | Signalfieldlab.com
Charlottesville, Virginia, United States

Summary

I am a Solution Architect known for my ability to transform complex concepts into practical, high-impact solutions. With a deep understanding of AI/ML Ops, IT Management, Data Strategy, Intelligence Analysis and Collection, Systems and Mission Engineering, I thrive in researching, designing, and delivering innovative, mission-driven solutions that enhance operational effectiveness across DoD, IC, and federal contracting environments.

My expertise lies in quickly identifying challenges, architecting scalable solutions, and executing high-value initiatives that align with strategic objectives. I bring a unique blend of technical depth and business acumen, allowing me to bridge the gap between emerging technologies and real-world mission applications. Whether it’s leading solution development for enterprise data modernization efforts or optimizing AI-driven intelligence workflows, I ensure that solutions are agile, secure, and impactful.

Key Expertise:
-AI/ML Ops & Data Management – Designing and deploying AI/ML-driven analytics, automation, and data ecosystems for enhanced decision-making
-Mission-Focused Systems Engineering – Architecting end-to-end solutions that integrate intelligence, cybersecurity, and operational effectiveness
-Winning Solutions & Capture Leadership – Directly contributing to high-stakes proposals ($40M–$800M+TCV), securing over $1.3B+ in awarded contracts

I thrive in high-pressure environments that demand agility, innovation, and results. Currently researching and writing guidebook for GenAI for federal proposal development.

Experience

Curious

Senior Solution Architect | AI/ML & Data Strategy | Innovation | $1.5B+ in Wins

January 2022 - Present (4 years)

Senior Solution Architect focused on building high-impact technical solutions for the U.S. Federal Government, especially in defense, intelligence, and national security domains. I lead the strategy, design, and execution of complex proposals—integrating AI/ML, cloud architectures, and data-centric methods to solve mission-critical challenges. Across a 25,000+ employee organization, I'm recognized as a top contributor to internal Communities of Practice in data science, solution architecture, and analytics. My work blends deep technical understanding with real-world mission awareness, helping teams shape innovative solutions that scale. I've developed generative AI-enabled toolkits that accelerate technical solutioning—from weeks to days.

Experience Highlights

-Mission-Focused Solution Architecture: Designs modular enterprise architectures integrating secure data flows, cloud-native components, and scalable logic tailored to mission needs—not just compliance checklists.

-Data Strategy & Analytics Innovation: Built structured data frameworks supporting mission logistics, operational forecasting, influence tracking. Applies scenario modeling and business analytics to mission and enterprise data problems.

-Visual Communication & Proposal Strategy: Creates proposal visuals that translate complex solution architectures, implementation timelines, and technical differentiation into intuitive, reviewer-friendly formats—beyond just infographics.

-Generative AI Toolkits & Prompt Design: Developed reusable prompt libraries and GenAI playbooks to support solution architects. Uses contrastive prompting and language modeling to surface high-impact options fast.

-Predictive Modeling & XAI Methods: Leads classification and forecasting projects across domains, integrating explainable AI (XAI), transparency frameworks, and feature attribution to support stakeholder trust.

Private

11 years 9 months

Senior Project Lead/Deputy Program Manager- Technology and Innovation

November 2012 - January 2022 (9 years 3 months)

Charlottesville, Virginia, United States

Led enterprise technology modernization, AI/ML-driven automation, and intelligence integration efforts for Department of Defense (DoD) and Intelligence Community (IC) clients. Oversaw mission-critical programs across knowledge management, targeting operations, and combat zone analysis—ensuring technical solutions directly supported operational execution.

Key Contributions:
- Developed Targeting Frameworks for Special Operations: Created and institutionalized processes for target development in support of United States Special Operations Command (SOCOM). Enabled integration of multi-source intelligence for lethal and non-lethal action.
- Senior Analyst for Counterinsurgency & Counterterrorism Targeting: Served as senior targeting analyst for high-priority programs in Iraq and Afghanistan. Led efforts to identify, assess, and disrupt threat networks across asymmetric and hybrid warfare environments.
- Engineered AI/ML-Driven Automation for Intelligence Workflows: Built tools to enhance Identity Intelligence (I2) workflows and accelerate threat analysis cycles. Integrated automation to support faster operational decision-making and mission planning.
- Directed Technical Capture for National Security Programs: Led technical strategy and proposal solutioning for high-value pursuits. Secured contract wins that advanced analytic capabilities and operational readiness across DoD and IC missions.
- Modernized Intelligence Workflows in Operational Settings: Integrated practical digital tools—data analytics, visualization platforms, and structured automation—into both deployed and reach-back units. Improved speed, usability, and mission alignment without compromising classification or operational integrity.
-Provided Combat-Zone Intelligence Support to Elite Units: Delivered forward-deployed analysis and targeting support to Joint Special Operations Command (JSOC), SOCOM, and other elite units. Supported direct action, influence operations, and strategic planning in theater.

Principal Analyst
May 2010 - October 2012 (2 years 6 months)
Charlottesville, Virginia, United States

Provided targeting and intelligence analytics expertise supporting special operations and DoD mission sets. Focused on intelligence collection,

analysis, and operational planning, enabling data-driven decision-making for warfighters.

Key Contributions:
✓ Developed and optimized intelligence workflows, ensuring rapid data fusion and real-time operational insights.
✓ Implemented targeting methodologies and HUMINT/SIGINT integration, improving mission success rates.
✓ Applied advanced analytics and automation, streamlining intelligence production and dissemination.

US Army

U.S. Army – Intelligence Officer, Counterintelligence Special Agent, Cryptologic Linguist

November 1995 - April 2014 (18 years 6 months)

Held progressively senior intelligence roles supporting special operations, conventional forces, and national-level agencies. Led HUMINT (Human Intelligence), SIGINT (Signals Intelligence), counterintelligence, and operational targeting missions across multiple deployments and strategic assignments—including roles at the National Security Agency (NSA), with the XVIII Airborne Corps, and in support of Combined Arms units. Provided direct intelligence support across various combat and contingency operations.

Key Contributions:
- Led Deployed Intelligence Teams in Combat and Contingency Operations (Iraq): Commanded multi-discipline intelligence teams in austere environments, providing real-time targeting support and threat assessments to Special Operations Forces (SOF) and joint task forces. Supported kinetic and non-kinetic operations under high operational tempo.
- Executed Source Operations and Multi-INT Fusion in Support of SOF: Directed HUMINT collection and source-driven operations to support SOF missions. Integrated SIGINT, HUMINT, and counterintelligence to enable time-sensitive targeting, situational awareness, and operational planning.
- Built Targeting Frameworks for Counterterrorism and Hybrid Warfare: Developed actionable targeting methodologies for counterterrorism, counterinsurgency, and irregular warfare missions. Designed analytical products that guided force employment, threat disruption, and operational prioritization.

- Served at NSA and Supported National Intelligence Priorities: Contributed to global SIGINT collection and mission integration efforts at the NSA. Bridged tactical and strategic intelligence flows to inform U.S. and allied operations.
- Supported Coalition and U.S. Missions in the Balkans: Deployed to Bosnia in support of multinational peacekeeping and stability operations. Provided on-the-ground intelligence support to combined arms and coalition forces, contributing to mission security and regional awareness.
