Alexei Fimine

Years of building and breaking IT systems to create real value | Full-stack and cross functional systems and solutions architecture and hands on development | AI initiation and value generation.
Vankleek Hill, Ontario, Canada

Summary

I grew up around family businesses, got a business degree, then spent 15+ years in IT trenches across industries. I understand why companies build systems, not just how to build them.

Most consultants can deliver on the specs. While I can certainly do that, I can also help you decide if you should build it at all—and whether it'll pay for itself, or if the spec is actually making sense as there are so many angles from pure business, to structure, maintenance, support etc.

What I Actually Do

I'm a full-stack developer who thinks like a business owner. I've written code in multiple languages, managed databases, handled CI/CD, deployed with Docker and Kubernetes, worked with everything from GitHub to ancient TFS. I've built systems from scratch and modernized legacy corporate core systems.

On AI Integration

Everyone's selling AI. I help you figure out which tools will save money and which will cost more than you'll gain. I use AI daily, coding assistants, automation, agent building, —I know the gotchas, learning curves, and hidden costs. While I integrate AI as a tool; I don't build the models and I am not claiming to be an LLM expert in pure low level math terms. I'm honest about risks and benefits because both are real and both are vague.

How I Work

I will not commit to something I'm not genuinely interested in. I either know it or I know where to look for answers.

What interests me: technical problems where I can make connection between what I do and the value that it brings. Business context matters as much as code. AI integration in real production systems. Technology decisions based on ROI, not buzzwords.

I create solutions defined by business deliverables, not geek talk and benchmark numbers. Will this make you money or cost you money? That's the question.

Normally a 10-minute talk is enough to know if we need each other.

Outside work: Husband, father of boys and girls, hobby carpenter and builder. There is no "undo changes" button in my wood shop. Come to think of it, I'll need to get one just to troll people.

Fellow developers, IT managers, recruiters, startup founders—if connecting makes sense for your situation, let's talk.

Experience

Pollard Banknote Limited
Senior Consultant
January 2025 - Present (1 year)
Winnipeg, Manitoba, Canada

Help the company modernize their software stack. Moving from PC desktop computing to the cloud.
As par of the project, I
- modernize/refactor current code base
- architect new applications suitable for web-based cloud deployment
- participate in solution architecture design and implementation
- participate in infrastructure architecture
- work closely with enterprise architects and other stakeholders
- help in designing and implementing new CI/CD flows
- coach personnel on new technologies and development approaches.

SGI
Senior Full Stack Software Developer

June 2023 - March 2025 (1 year 10 months)
Regina, Saskatchewan, Canada

Full-stack software development in Automotive Insurance industry.
ReactJs/.NET Event Sourcing, Azure, Git

Warner Bros. Discovery
Senior Software Developer
August 2021 - December 2023 (2 years 5 months)
Knoxville, Tennessee, United States - Remote

Front-end software development for multiple internal and external clients. Legacy and new technology. All stages of development from planning to production support in close collaboration with all stakeholders.

Technology stack:
- AngularJs, Angular 9-13, TypeScript, JavaScript, StencilJs, CSS, SCSS, Less, Git, Jenkins, Jira - you know: the usual stuff.

PSP Investments
Remote Angular / Azure / .NET / SQL Developer
November 2020 - May 2021 (7 months)
Montreal, Quebec, Canada

Working on several Angular 11 / Azure applications supporting company's internal and external clients. Stack: Angular (constantly evergreening), .NET, SQL Server, MS Azure CI/CD

2020 Inc.
Remote Front-End / Full-stack Developer
January 2018 - July 2020 (2 years 7 months)
Montreal, Canada Area

Front-End and Full-stack solution architecture and software development and production support. ReactJs / React ES6/ES7 / Angular/JS Progressive Web App, PWA, and a lot of different back-end technologies (.NET Web API, SalesForce, SQL Server etc). Globally distributed team.

CBC
IT Consultant - UI Dev / Full-Stack
July 2017 - January 2018 (7 months)
Montreal, Quebec, Canada
