Anthosa Delivery Platform

Chamara Somaratne

Leader with Radical Empathy | Ensuring Technology Serves People, Not Replaces Them | Building Sovereign Ecosystem: tinyurl.com/sovereign-ecosystem | Contact: 0433 002 884
Greater Melbourne Area

Summary

. .The SaaS clouds have shifted from convenience to captivity and corporate surveillance. I am building the stack to stop "intelligence extraction" and "intent-mining," shifting enterprises from OpEx dependency to strategic asset ownership.We leverage global hyperscalers purely for dynamic scale and disaster resilience through "Confidential Cloud Bursting." Your data remains completely cryptographically secure and private while harnessing the raw elasticity of the public cloud.As the architect of the Sovereign Ecosystem, I lead: Anthosa: Human-centred strategic advisory on digital sovereignty. Sovereign Stack: The verifiable trust layer for multi-cloud software sovereignty. PicoDC: High-density physical hardware for localised edge sovereignty. HDP AI Lab: Prototyping solutions for preserving human agency.Whether on-premise or in the cloud, the behaviour is identical: Trustworthy, verifiable, and transparent.https://sovereignstack.dev/portrait.html’

Experience

Sovereign Stack
Founder
February 2026 - Present (6 months)
San Francisco Bay Area

Sovereign Stack is the cryptographically verifiable trust layer enabling digital independence. We provide enterprise-level infrastructure and a local-first control plane to help organisations escape hyperscaler captivity.

Digital Sovereignty: We enable organisations to reclaim their data and stop the bleed of "intelligence extraction".
The Exit Strategy: We move enterprises from a state of ongoing SaaS OpEx dependency to strategic asset ownership.

Multi-Cloud Trust: I am designing systems that allow companies to confidently deploy on-prem, colocate, or leverage confidential cloud bursting without losing control.

Run your TCO Analysis: https://sovereignstack.dev/landscape.html
Read our strategic pivot: https://sovereignstack.dev/why.html

PicoDC
Founder
April 2026 - Present (4 months)

PicoDC is the physical bedrock of the Sovereign Ecosystem. Because software sovereignty is an illusion without hardware sovereignty, we are building the decentralised & confidential "Sovereign Edge."

Hardware Sovereignty: Executing a strategic land-grab within Tier-1 Co-Location providers to deploy our specialised post-GPU compute (Engram Fabric).
Highly Confidential AI: Providing the dedicated physical nodes required for highly sensitive enterprise workloads that cannot be trusted to public cloud monopolies.
Local Asset Control: Partnering with regional Managing Directors to build local Managed Service Provider (MSP) channel ecosystems that keep physical infrastructure securely within sovereign borders.

Anthosa Consulting
Founder
August 2018 - Present (8 years)
Melbourne, VIC

Anthosa is the strategic advisory arm of the Sovereign Ecosystem. I work directly with executives to translate bold strategy into measurable outcomes, ensuring technology serves people rather than replacing them.

Tech Sovereignty Strategy: We enable financially sustainable, human-centred transformation that helps organisations modernise faster and embed innovation.
Measurable Impact: Our methodologies deliver transformation that reduces costs by 40% and accelerates delivery by 60%.
Retaining Local Value: We build 100% local teams, shifting the retained value ratio to $1:$1.25—vastly outperforming the industry average.

HDP AI Lab (Incubator)
Co-Founder (with my 8-year-old son)
November 2025 - Present (9 months)
Melbourne, VIC

The Human Dignity Project (HDP) AI Lab is "The World's First Doing Tank" and the core incubator behind the entire Sovereign Ecosystem. Co-founded with my young son, it was built on a simple premise: preserving human agency in the Age of Intelligence.

The Inspiration: We research the gaps between big AI promises and real-world impact, designing alternatives that keep human dignity and full employment at the centre.

Prototyping Sovereignty: The Lab is where we prototype practical, market-ready solutions—like the Sovereign Stack—to prove that AI can create value with people, not just extract it from them.

AI Sovereignty: We advocate against an automation-centric trajectory that drives economic destruction, fighting instead to ensure prosperity is created and retained locally.

10% Foundation (10PCF)
Podcast Host & Founder
March 2025 - Present (1 year 5 months)
Global

I host the Transformation 2.0 Podcast for Change Leaders: Insights on Transformation, Innovation & Growth.

Transformation 2.0 is a podcast tailored for executives, innovators, and professionals who are shaping the future of business. In a rapidly evolving world, organisations encounter constant change—be it in leadership, technology, culture, or strategy. This podcast is a platform for forward-thinking leaders to examine the challenges and opportunities of transformation, innovation, and growth.

Through insightful conversations with industry experts, executives, and change-makers, Transformation 2.0 provides actionable strategies, thought leadership, and real-world stories to help listeners embrace change, drive innovation, and lead with confidence.

Expert Author Community
Author
June 2024 - November 2025 (1 year 6 months)
Melbourne, VIC

As part of the Expert Author Community, I embarked on a transformative journey to share the insights, experiences, and methodologies behind Anthosa Consulting's human-centred approach to innovation and strategy execution.

What began as a single book concept—Transformation 2.0—has evolved into three distinct works, each designed to guide business and technology leaders through the most pressing challenges of digital transformation, leadership, and sustainable innovation at scale.

The Definitive Guide to Digital Transformation: How to Overcome Challenges of Digital Transformation, Technology Modernisation, and Artificial Intelligence Adoption;
A practical e-book and a printed book that breaks down the key barriers to digital transformation, from tech debt to adoption, and equips readers with strategies to drive change and modernise with confidence.
Join the waiting list: https://www.anthosa.com/books-definitive-guide-to-digital-transformation/

Nimble Leader: The New C-Suite Playbook for Navigating Digital Transformation and AI Adoption;
A printed book for senior leaders rethinking how leadership, culture, and strategy must evolve in an era shaped by AI, hybrid work, and rapid disruption.
Join the waiting list: https://www.anthosa.com/books-nimble-leader/

Transformation 2.0: Modern Business Guide to Human-Centric Innovation at Scale;
A business fable that captures Anthosa's proven methodology for sustainable transformation, drawn from over 50 strategy engagements, with real-world results exceeding industry benchmarks in both execution and sustained performance.
Join the waiting list: https://www.anthosa.com/books-transformation-2-0/

These books are part of a hands-on, minimum viable publishing journey, combining deep strategic insight with storytelling and powered by a commitment to share, simplify, and scale what works.

Anthosa Delivery Platform – acquired by a top global tech consulting firm for exclusive in-house use

Founder, Creator

January 2015 - September 2019 (4 years 9 months)

Sydney, New South Wales, Australia

Proven Innovation: Anthosa Delivery Platform – Now Powering a Global Tech Consulting Leader's Delivery Operation

The Anthosa Delivery Platform was created to give executives crystal-clear, real-time visibility into software engineering delivery — especially in complex environments run by multiple external service providers. Designed for distributed delivery, it linked engineering performance directly to strategic business outcomes, enabling faster, data-driven decisions in high-stakes transformation programs.

It empowered organisations to collaborate seamlessly across vendors using Service Integration and Management (SIAM) models, streamlining internal and external teamwork while modernising Enterprise Service Management (ESM) — from service innovation and onboarding to long-term governance.

Covering the full Plan, Build, and Run lifecycle, the platform industrialised IT4IT value streams and embedded ITIL best practices into large, mixed IT/OT environments. Its unique work package management approach bridged the gap between multi-year strategy and day-to-day delivery, accelerating DevOps and Continuous Delivery adoption at scale.

The result: a disciplined, unified way to align strategy with execution, minimise delivery risk, and increase transformation success rates.

Recognising its impact, a leading global technology consulting firm acquired the platform implementation (excluding its proprietary AI/ML models that bridge strategy and execution) to power its first major digital transformation program for a flagship Australian healthcare client — proving its ability to deliver measurable value in enterprise-scale change.

DayTwo Consulting (Wound-up)

Founder

July 2017 - August 2019 (2 years 2 months)

Sydney, New South Wales, Australia

Digital Strategy and Marketing Agency for Small Businesses.

Lesson Learned: This market is highly competitive, low margin, and the only way to compete is by price.

DXC Consulting ANZ

3 years 8 months

Practice Director - Strategy, Innovation and Transformation

January 2016 - August 2018 (2 years 8 months)

Sydney, Australia

DXC Technology is a Fortune 500 global IT services leader with more than 130,000 people in 70-plus countries entrusted by customers to deliver what matters most. It uses the power of technology to deliver mission-critical IT services that drive business impact. DXC is an employer of choice with strong values and fosters a culture of inclusion, belonging and corporate citizenship.

Chamara incubated a new practice as a start-up within DXC. He developed the business strategy and go-to-market strategy for the practice. He collaborated with other senior leaders to design offerings and develop partner ecosystems and the sales pipeline. Chamara also managed sales and delivery across ANZ. He built a core team and led globally distributed delivery teams for customers across financial services, healthcare, retail, and the public sector.

Innovation Executive - Financial Services (Head of Strategy, Innovation, and Transformation)

January 2015 - May 2016 (1 year 5 months)

Sydney

Chamara joined CSC (~3,000 people in Australia and NZ) as its first Innovation Executive in Australia.

He led the development of account strategies to diversify the business and modernise its service offerings in the financial services vertical. During his time, CSC acquired and integrated UXC (in which Chamara played a role), which turned it into 6,000 people across Australia and NZ.

Following this, HPES (Spun off HP's Enterprise Services unit, originating from former EDS, which HP acquired) was reverse-merged into CSC to form DXC Technology, becoming over 12,000 people across Australia and NZ, and globally 180,000 people.

Chamara developed account strategies for Financial Services sector customers to drive innovation, diversify service offerings, and grow the digital services revenue share.

Capgemini Invent

Business Technology Consulting - Strategy and Transformation Lead
August 2011 - January 2015 (3 years 6 months)
Sydney, Australia

Led digital transformation planning and delivery engagements with globally distributed teams for clients in financial services, energy, transport, retail and public sector.

Commonwealth Bank

Enterprise Strategy and Transformation Lead
January 2007 - July 2011 (4 years 7 months)
Sydney, Australia

Provided digital transformation consulting services to business divisions to launch and deliver multiple projects and programs as part of the enterprise strategy and transfirnation team (within the enterprise services unit of the bank). The areas of the bank that I supported were;
- Channels (Netbank, CommSee, and CommSec)
- Core banking modernisation (Customer, Payments, Service Management)
- Payments transformation (Payments Hub)
- Wealth management (Superannuation)
- Insurance (Life and General)

GlobalFoundries

Technology Strategy and Engineering Delivery Lead
January 1998 - January 2007 (9 years 1 month)
Singapore

Technology Strategy & Engineering Delivery Lead (2006–2007)
Planned the CIM and AMHS for APAC’s first 300mm semiconductor fab (Fab 7 – a joint development with IBM). Designed and executed the end-to-end automation, control systems, and operational readiness strategy to enable initial prototyping in 2005, before large-scale production was paused due to market conditions. Returned to Australia, carrying forward expertise in complex automation, high-tech innovation, and transformation to future consulting and innovation programs.

Engineering Delivery Lead – Multi-Fab Automation & Transformation (2003–2006)
Directed multi-million-dollar automation programs across Fabs 2, 3, 5 (SMP) and 6 (CSP). Delivered and continually optimised CIM, AMHS, MCS, RTD, QMS, APC, MES, PLM, and CRM systems to enhance yield, throughput, and decision-making.
Key innovations:
- Dynamic Sampling – Optimised real-time material routing
- Capacity Simulations – Data-driven product mix optimisation
- Asset Maintenance Apps – Eliminated paper-based maintenance workflows
- Logical Data Aggregation – Multi-fab, real-time operational reporting
- Executive Dashboards – Live, strategic visibility for leadership

Senior CIM & AMHS Engineer – Fab 6 JV with Agilent/HP (1999–2002)
Core member in ramping up Fab 6, a joint venture with Agilent Semiconductor Products Group (spin-off from HP, later Avago/Broadcom).
Notable achievements:
- Delivered APAC's first Oracle Parallel Server on an active-active HPC cluster with Infiniband — radically improving transactional performance for real-time control
- Reverse-engineered a multi-cluster active-active control system, saving millions in TCO

CIM & AMHS Engineer – Chartered Semiconductor Manufacturing (1997–1998)
Graduated in UNSW's first Mechatronics cohort; joined CSM Singapore to apply robotics, automation, and integration expertise in Fabs 2 and 3 while building deep operational and semiconductor industry knowledge.

Education

UNSW
Bachelor of Engineering (Honours), Mechatronics · (1994 - 1997)

Monash Business School
Global Executive MBA · (September 2020 - November 2021)
