Immunodiagnostic plasma amino acid residue biomarkers detect cancer early and predict treatment response

Wesley Sukdao

Biotech founder building next-generation multi-cancer early detection tests
Cambridge, England, United Kingdom

Summary

Cancer shaped my life long before I entered biotech.By 13, I had lost my 62-year-old father, my 24-year-old brother, and our 6-year-old nephew to cancer. Three generations in six years. For a long time cancer felt less like a disease and more like a destiny. Current data suggests that for around half of us, cancer will touch our lives directly. And the challenge is not only treatment - it's timing.Most cancers are still found too late, when options are fewer, outcomes are worse, and therapies become harder to deliver effectively.That is why I co-founded Proteotype.We are building next-generation multi-cancer early detection tests designed to identify cancer earlier through a simple blood draw by measuring the body's proteomic response to tumour development.Our goal is bigger than diagnostics alone. Earlier detection has the potential to improve survival, expand treatment options, and help connect the right patients to therapies when intervention may be most effective.The future of oncology will belong to those who can detect disease earlier, monitor it more intelligently, and personalise intervention more precisely.That's the future we're building at Proteotype.

Experience

Proteotype Diagnostics
6 years 8 months

Chairman and CEO
December 2023 - Present (2 years 8 months)
Cambridge

If V is for Vendetta, what is W for?

Co-Founder and Angel Investor
December 2019 - November 2023 (4 years)
London Area, United Kingdom

The Waterboy

Education

University of the Witwatersrand

BSc Hons, Advanced Mathematics of Finance

University of KwaZulu-Natal

BSc Actuarial Science, Majors in Statistics and Actuarial Science
