# Jayson Winchester

Founder @ Ordinant | Enterprise Reasoning Infrastructure. Moving AI from Probability to Precedent.
Hobart, Tasmania, Australia

## Summary

What if Enterprise Truth had coordinates?

We organized physical space with reference frames thousands of years ago.
Yet enterprises still navigate decisions with vibes, inboxes, and PDFs.

Today we're trying to build autonomous agents on top of probabilistic models, treating reasoning as a creative act of prediction, rather than a spatial act of navigation.

The result is familiar:
AI that's brilliant at conversation, but dangerous at execution.
Not because it's unintelligent, but because it has no anchor.

Inference needs Reference.

I founded Ordinant to provide that anchor.

We're building deterministic reasoning layer that grounds AI decisions in explicit authority, jurisdiction, and time.

We don't try to make models smarter.
We make the environment navigable.

What we're building is:
- Not a chatbot (interface)
- Not an automation tool (pipes)
- Reasoning infrastructure (state)

This is the shift from Probability to Precedent.
From guessing the policy to proving compliance.
From fluent answers to defensible decisions.

I’m building deep infrastructure to close the Liability Gap that’s holding enterprise AI back.

If you’re an investor, architect, advisor or founder thinking about:
- control systems,
- governance-as-code,
- agent safety,
- or cognitive architecture,
let’s connect.

---

## Experience

### ORDINANT
Founder
July 2024 - Present (1 year 6 months)

Building the Reasoning Infrastructure for the Agentic Enterprise.

Today’s enterprise systems capture Data (what happened) but lose the Reasoning (why it happened). They track artifacts, not decisions.

Ordinant solves this architectural flaw. We replace probabilistic inference with explicit, auditable State.

The Mission:
- Architecting the Reasoning Layer: Building a decision engine where humans and AI operate on the same verifiable logic.
- Encoding Authority: Moving governance out of "text documents" and into a deterministic graph (VRUs).
- Solving the "Inference Trap": ensuring agents can act safely in high-liability environments without hallucinating rules.
- Defining the Standard: Creating the infrastructure for compliant, explainable, and autonomous work.

Ordinant is the bridge between "Chatbot" and "Agent."

### China Construction Oceania Pty Ltd
Digital Delivery Director
April 2023 - July 2024 (1 year 4 months)
Abbotsford, Victoria, Australia

Spark North East Link Tunnels D&C

2 years 5 months

Digital Delivery Director

October 2022 - July 2024 (1 year 10 months)

Abbotsford, Victoria, Australia

Survey Manager

March 2022 - October 2022 (8 months)

Abbotsford, Victoria, Australia

CPB Contractors

Survey Manager

January 2020 - March 2023 (3 years 3 months)

Melbourne, Australia

Outright Surveying

Survey Project Manager

September 2019 - January 2020 (5 months)

Melbourne,

Land Surveys

3 years 6 months

East Coast Projects Manager

June 2018 - September 2019 (1 year 4 months)

Melbourne, Australia

Engineering Surveyor

April 2016 - May 2018 (2 years 2 months)

Melbourne, Australia

## Education

RMIT University

Diploma, Surveying
