Ignacio Van Droogenbroeck

Founder @ Basekick Labs · Data infrastructure for the tactical edge, aerospace telemetry, and industrial IoT · Air-gap native, MOSA-aligned, open Parquet · No SaaS, no lock-in.
Santo Domingo District, Heredia, Costa Rica

Summary

I build infrastructure that works where SaaS can't.Founder of Basekick Labs. We make tools for teams that need high-throughput data pipelines, full control of their data, and zero dependency on a vendor's cloud. Self-hosted, open source, no proprietary formats trapping your data when you want to leave.I'm obsessed with infrastructure that feels invisible. High throughput, low cost, no drama. Tools that just work whether you're on AWS, air-gapped in a SCIF, or on a platform 400 miles above the earth.What we build:- Arc is a columnar analytical database. Single Go binary. 19.9M records/sec ingestion on a single node. Standard SQL. Open Parquet on storage you control. Running in production across aerospace flight operations, tactical edge platforms, industrial IoT, fleet tracking, observability stacks, and AI infrastructure. AGPL-3.0 with a commercial license for organizations that need it.- Liftbridge is lightweight message streaming with Kafka semantics, built in Go. Acquired and revived under Basekick Labs. 2.7K+ GitHub stars.Together: Liftbridge collects and buffers. Arc stores and queries. Parquet keeps your data portable forever. No lock-in, no hostage formats, no SaaS bill that scales with your success.Before Basekick Labs I spent years in Sales Engineering, Solution Architecture, and Customer Success at companies building production data systems at scale. That time taught me what engineers actually need when something breaks at 3am, and what vendors consistently fail to deliver.I build in public. I share what works and what doesn't.If you're working on:- Telemetry at the tactical edge or aerospace platforms- Industrial IoT and manufacturing data pipelines- Observability infrastructure at scale- AI agent memory and analytical backends- Message streaming without the Kafka complexityLet's talk. github.com/Basekick-Labs/arc basekick.net

Experience

Basekick Labs

Founder & Product Builder

August 2025 - Present (11 months)

Newark, DE

Most analytical databases were built for the cloud. They assume stable connectivity, managed infrastructure, and a vendor you're willing to trust with your data indefinitely. A lot of the world doesn't work that way.

Tactical edge platforms go dark. Factory floors are air-gapped by policy. IoT deployments span thousands of nodes with intermittent links. Observability stacks drown in cardinality. AI agents need memory that's queryable, not just retrievable.

We build for those environments.

Arc is a columnar analytical database. Single Go binary. 19.9M records/sec ingestion on a single node. Standard SQL across the full archive. Self-hosted, air-gap native, open Parquet on storage you control. No SaaS dependency, no vendor lock-in, no proprietary format trapping your data.

Running in production across aerospace flight operations, industrial IoT, fleet tracking, observability platforms, and AI infrastructure.

Liftbridge is a lightweight message streaming system with Kafka semantics built in Go. Acquired and revived under Basekick Labs. 2.7K+ GitHub stars.

The stack:
Liftbridge (collection + buffering) → Arc (storage + analytics) → Parquet (portable, yours forever)

What I focus on:
- Product strategy and technical architecture
- Vertical go-to-market: aerospace & defense, industrial IoT, manufacturing, observability, AI infrastructure
- Open-source community growth and developer experience
- Enterprise deals for teams that need clustering, RBAC, air-gap deployment, and support

AGPL-3.0. Commercial license available. If you're running workloads where the database has to work regardless of what the network is doing — let's talk.

ExyData Ventures
Founder & Principal Architect
June 2023 - August 2025 (2 years 3 months)
London Area, United Kingdom

ExyData Ventures is a venture studio building automated SaaS tools for data, security, and business operations. From real-time analytics platforms to SSL automation and time-series data archiving, we turn complex problems into scalable, zero-touch products.

Key Achievements & Responsibilities:

Incubated and launched multiple products, including:

• ExyData – A cloud-native, serverless data platform delivering real-time streaming analytics.
• SSLGuardian – Automated SSL certificate monitoring and renewal service for SMBs.
• ExyData Historian – A time-series data archiving and querying engine for InfluxDB users, built on Parquet and DuckDB.

• Defined technical strategy, architecture, and product vision across ventures.
• Took products from 0 → MVP → early traction, driving roadmap through customer feedback.
• Led development using Apache Flink, ClickHouse, RabbitMQ, and Superset to build high-performance, low-latency systems.
• Balanced tech leadership with hands-on execution—writing code, scaling infra, and solving edge-case nightmares.
• Managed customer onboarding, support, and continuous improvement loops.
• Designed self-serve, automated solutions to minimize operational drag and deliver seamless UX.

CDUser.com
Blogger and Vlogger
2009 - June 2025 (16 years)

Since 2009 I wrote articles and record videos to train the IT Pro community on my blog and Youtube Channel (+16k subscribers).

In these spaces, you can read/watch content about, but not limited to:

- Azure and several Microsoft technologies, like Windows Server, Storage Pools, Hyper-V, etc.
- AWS, DigitalOcean, and Google Cloud.
- Kubernetes and Docker, among other solutions like Canonical Multipass or LXC.
- Linux Servers (Ubuntu, CentOS, etc.) and related technologies. Apache, Nginx, MySQL, MariaDB, and InfluxDB
- Cloud Solutions like Microsoft Office 365, G Suite, and Google Cloud Identity.

InfluxData

2 years 6 months

Senior Sales Engineer

January 2022 - May 2023 (1 year 5 months)
San Francisco Bay Area

Time-Series Database Wizardry | Pre-Sales | Developer Enablement

- Led technical sales across EMEA and the Americas, winning enterprise clients by running POCs, demos, and deeply cursed custom integrations.
- Helped customers migrate from Prometheus, Graphite, and other legacy platforms to InfluxDB — without anyone rage-quitting.
- Architected integrations with Grafana, Kubernetes, and custom APIs for real-time monitoring and alerting.
- Played the role of solutions shrink, translating vague business pain into actual data pipelines.

Solutions Architect

December 2020 - January 2022 (1 year 2 months)
San Francisco Bay Area

Architecting Time-Series Wins | Enterprise Deployments | Migration Magic

- Led technical design and implementation of InfluxDB for strategic enterprise accounts, focusing on high-scale environments and complex integrations.
- Delivered training, onboarding, and technical enablement to customer teams — from infra setup to best practices and day-2 ops.

- Owned migrations from competing platforms, developed custom integrations (Grafana, device monitoring, alerting workflows), and adapted deployments for unique client needs.
- Became go-to internal resource for all things InfluxDB, value props, and advanced time-series use cases.

Mission: Make time-series sexy, performant, and ridiculously usable. Mostly succeeded.

netlabs
DevOps Engineer
September 2019 - August 2020 (1 year)
Uruguay

Cloud Infra | Automation | Payments Platform Support

- Managed deployment pipelines, compliance workflows, and system automation for a PCI-compliant payments platform.
- Used Red Hat, Ansible, JBOSS, and Zabbix to keep things online while whispering to bash scripts like a shell sorcerer.
- Reduced manual effort through automation and taught ops teams how to not break everything on Friday at 5pm.

Xcellere
Business Development & Alliances Manager
April 2018 - August 2019 (1 year 5 months)
Argentina

Help Desk Company Goes Cloud-Native: The Makeover Show

- Spearheaded Xcellere’s pivot from IT support shop to full-stack cloud solutions partner.
- Closed partnerships with Google Cloud, DigitalOcean (MSP), and drove first-ever public cloud offering in the region.
- Built GTM strategies, ran cold outreach, and evangelized cloud before it was cool again.

Westcon
Cloud Business Manager
January 2017 - March 2018 (1 year 3 months)
Buenos Aires

Channel & Portfolio Strategy | Microsoft CSP Programs

- Managed cloud sales and partner enablement across Argentina, Uruguay, and Paraguay.
- Delivered go-to-market strategies for Azure, Office 365, and IOT-related products.
- Led marketing, training, and pre-sales enablement across partners, while keeping vendor SLAs from descending into madness.

Ricoh Latin America Inc
Services Account Executive
September 2016 - December 2016 (4 months)
Olivos, Argentina

Responsible for startup the Ricoh IT Services Business in Argentina. I'm building alliances to create a portfolio of products and services based on the 3rd IDC Platform (Mobility, Cloud, Big Data/Analytics, and Social Business) including Datacenter, Virtualization, and IoT.

Development of new customer contacts, reviews leads, protects territory, and participates in increasing revenue stream within current accounts. Actively participates in account reviews. Leads and participates in customer strategy planning and collaborate with all business functions to create a complete Strategic Customer Account plan.

Licencias OnLine
Cloud Business & Solutions Architect
October 2012 - May 2015 (2 years 8 months)
Buenos Aires

In charge of the development of the Cloud/Hosting Business across Latam and USA, I supported Telecommunications and Cloud Providers companies to develop a Cloud Go To Market Strategy.

I helped to create Cloud Solutions (DaaS, DRaaS, BaaS) based in Pay Per Use models using Microsoft SPLA, vCloud Air Network (Former VSPP), and Citrix Service Provider Program, Veeam Service Provider, and Zimbra Business Services Provider.

Some of the daily tasks was to engage with customers delivering business presentations to partners and end customers in events of demand generation in all Latam and USA. I created and delivered Webinars and Workshops for education to our partners enabling them to deliver great solutions based in

Cloud to their end customers. Help with the sizing of a solution, including technical, licensing, and business matters.

Account planning, analyze of the pipeline, architecting new products and solutions to bring ideas to the customer for exploiting your investment of datacenter resources (Eg. customers: Telefonica, Triara/Claro, Level3, Kio Networks, etc)

Also, I supported to Communications and Marketing team writing articles for the website of Licencias OnLine and for magazines. Tweeting every day about news and marketing's initiative in the account @licenciasonline.

Almost tripling the Quota from FY12 to FY14. As a regional resource, I spent 50% or even more traveling across Latam, creating new customers relationship trough one to one or one to many.

Channel Management, Product Management, and Business Development was the three pilar of my role in this company.

TechDays Pro
Cloud Infrastructure Consultant
April 2009 - September 2012 (3 years 6 months)
Buenos Aires

Maintenance and consulting services of Cloud Services with Linux and Microsoft technologies to enterprise customers in Argentina, Brazil, and Chile.

Analysis, planning, and deploy of Windows and Ubuntu Server. Productivity Solutions as Project Server and SharePoint. Administer of VMware Solutions like vSphere and vCenter.

Customer Management, Demand Generation with presentations and implementation of technologies was part of my role.

Telefónica Argentina
Project Manager
September 2007 - March 2009 (1 year 7 months)

Project Manager for big customers of Argentina (Patagonian Region) and subsidiaries of Telefonica in Latin America for the implementation of the business platform and strategy.

Project Leader of provisioning of MPLS Networks, TOIP Phone, Point to Point end to end, from the take the requirements of the customer, passing for the investments process, and coordinate the provisioning of the services across several areas of the company.

Specialties: Customer Relationship. pre-sales, post-sales, engineering process, investment, and provisioning.

Microsoft
Technology Solution Professional
December 2005 - July 2007 (1 year 8 months)

Product Specialist for Project Server and Office Communications Server (Lync) for Argentina, Chile, Bolivia y Uruguay.

Technical and business presentations for corporate customers (EPG) (Bank, Government, Oíl & Gas). Write of technical purposes for implementations, the leadership of proof of concept executed by the partners.

Training to intern sales team and partners about the product and business of Project Server.

Technology managed, Windows Server 2003, Project Server 2003/2007, Microsoft Office SharePoint Server 2003/2007, and SQL Server 2000/2005.

Integration Project of Project Server and SharePoint with third-party platforms like SAP.

Solution Testing, Workshops to customers, and intern sales team.

Building of newsletter and part of the “911 Project” initiative world for critical support of Project Server.

In general, Presales tasks and annual quote of sales in U$S2.1 millions.

Gobierno de la Ciudad de Buenos Aires
Technical Trainer
November 2005 - December 2005 (2 months)

Trainer of Windows Server 2003 for the administrator group who they coming from administer Novel platform.

AD administration, Disaster Recovery, SMS 2003, Networking Fundamentals.

Maitén de Boaria S.A.
Technical Support Specialist
April 2005 - November 2005 (8 months)
Buenos Aires

Technical Support Services in Hardware and Software. Microsoft Exchange, Lotus Notes, and SQL Server. Also Networking.

Raster S.H
Technical Support
September 2004 - March 2005 (7 months)
Buenos Aires

Assembly and repair of PC under Microsoft environment. Networking Devices and Microsoft Windows Server 2000/2003 maintenance. Installation and maintenance of Web Server under Apache and IIS. Administration of Microsoft SQL 2000.

Webnet
Technical Support
September 2003 - October 2004 (1 year 2 months)
Buenos Aires

Configuration and Maintenance of Nodes karlnet Turbocell, Installation, and Configuration of Mikrotik and Cisco Systems Routers, Administration of wireless corporate services with Access Point of Karlnet/Lucent Technologies and Linksys,

Server Maintenance of Windows 2000 Advanced Server, Phone Support, Supervision of technical support and service implementations Wireless residential.

Education

Universidad Argentina de la Empresa
Bachelor's of Science in Communication, Journalism, Communications, Public Relationship. · (2007 - 2012)
